Panasonic® “ZNR” Transient/Surge Absorbers Type D and E

Features: • Excellent clamping voltage characteristic and fast response time (50nsec.) when subjected to impulse surges. Eliminates the discharge lag that is indurative of gap-type arrestors. • Bilateral and symmetrical V-1 characteristic curve. The ZNR can, therefore, be used both in AC and DC circuits, for protection of either positive or negative transients. Panasonic ZNRs are zinc oxide nonlinear resistors whose resistance changes as a function of the applied voltage. The ZNR has a bilateral and symmetrical V-1 characteristic curve and can therefore be used in circuits in place of back-to-back zener diodes. This gives your circuit clamping protection in either direction. The ZNR thus provides a highly reliable and economical way to protect against repeated high voltage transients and surges such as those produced by lightning, switching surges and noise spikes.

Ratings: Varistor Voltage: The voltage between two terminals with the specified measuring current CmA DC applied is called Vc. The measurement shall be made as fast as possible to avoid heat affection.

Maximum Allowable Voltage: The recommended maximum sine wave voltage (rms) or the maximum DC voltage that can be applied continuously.

Withstanding Surge Current: The maximum current within the varistor voltage change of 510% with the standard impulse current (8/20µ second) applied one time.

Maximum Clamping Voltage: The maximum voltage between two terminals with the specified standard impulse current (8/20µ second) illustrated.

V Series: ZNR Surge Absorbers Type D, Series V, have been put on the market as a result of the development of a new ceramic material composition, higher quality of parts and materials used in the varistor and an improvement of manufacturing process control. They have a smaller size but a larger surge current and energy ratings so that they can be used in smaller equipment and exhibit their excellent surge protection ability in severe conditions. **Features:** • Improved in “Surge Current Handling Capability (@ 8/20 µs, 2 times)” by 1.6 to 3.0 times over the current conventional type. • Very large “Energy Handling Capability” absorbing transient overvoltages in compact sizes • Varistor voltages 250V-1850V are listed under UL1414, UL1449 and CSA 2221 01, varistor voltages 82-150V are UL1449 only • Wide products range for transient/surge protection on AC 100V to AC 480V nominal system with the maximum peak current ratings of 600A to 6500A (@ 8/20 µs, 2 times) • Operating Temperature Range -40°C ~ 85°C

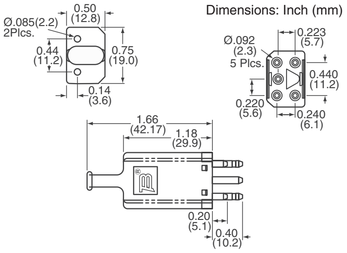
NEW! 5-Pin Multi-Stage Protector and Gas Discharge Tube Protector

Dimensions: Inch (mm)



2410 Series – 5-Pin Multi-Stage Protector (MSP®): This is the latest generation telecommunications protector for high performance and long life in overvoltage protection of copper pair voice-band and high-speed data circuits. Bourns MSP combines the advantages of gas tube and solid state protection while integrating three advanced technologies: a proprietary high-efficiency gas discharge tube, precision matched metal oxide varistors and a patented Switch-Grade Fail-Short mechanism. The Switch-Grade Fail-Short mechanism ensures superior thermal protection with fast acting, highly reliable response to thermal overload conditions. This combined technology provides lower capacitance, higher reliability and longer life than competitive hybrid technologies.
FEATURES: • Solid Brass, Gold-Plated Pins • Storage Temperature: -55°C ~ 85°C • Operating Temperature: -55°C ~ 85°C

2420 Series – 5-Pin Gas Discharge Tube (GDT) Protector: The 2420 overvoltage protection modules utilize Bourns' proprietary high-efficiency gas discharge tube with our patented Switch-Grade Fail-Short mechanism to provide robust and reliable surge and thermal overload protection at a very competitive price. This series is based on Bourns' three-terminal common chamber GDT. This design provides greatly improved and balanced turn-on characteristics for overvoltage protection. The GDT is UL approved for use without a back-up device. Air back-up devices can become contaminated; the circuitry of the 2420 eliminates this possibility. Our unique Switch-Grade Fail-Short device provides more reliable thermal overload protection compared to commonly used solder pellet or insulation burn-through designs.
FEATURES: • Solid Brass, Gold-Plated Pins • Storage Temperature: -55°C ~ 85°C • Operating Temperature: -55°C ~ 85°C

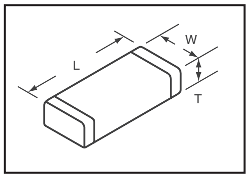
Static Guard Multilayer Ceramic Varistor TVS Surface Mount

ESD Protection for CMOS and Bi-Polar Systems



AVX StaticGuard devices are manufactured with the same multilayer construction as the AVX TransGuard Transient Voltage Suppressers (TVS).

The low capacitance of the StaticGuard products makes them ideal choices for ESD protection on high speed data lines.

Also, the low leakage current feature makes these parts optimal for battery operated equipment.

TransFeed Multilayer Ceramic Varistor TVS TVS Protection and EMI Attenuation in a Single Chip

AVX has combined the best electrical characteristics of its TransGuard TVS and its Feedthru Capacitors into a single chip for state-of-the-art overvoltage circuit protection and EMI reduction over a broad range of frequencies. This unique combination of multilayer ceramic construction in a feedthru configuration gives the circuit designer a single 0805 chip that responds to transient events faster than any TVS device on the market today and provides significant EMI attenuation when in the off-state. **Typical Applications:** • Fingerprint ID Circuit • Magnetic Field Circuit • LCD Dashboard Driver

When no problems exist, TVS diodes are invisible to the circuits they're protecting. But when potentially damaging transients occur, the TVS diodes provide high-speed "clamping" to prevent damage - after which they return to their electronically invisible state. Littelfuse TVS diodes are available in industry-standard packages.

Features: • Glass passivated junction • Low clamping factor • Uni-directional and Bi-directional • 100% surge tested • UL listed

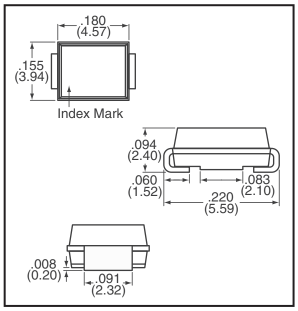
NEW! TISP4CxxxH3BJ Series – Bidirectional Thyristor Overvoltage Protector

Dimensions in Inch (mm)



This device is designed to limit overvoltages on the telephone line. Overvoltages are normally caused by A.C. power systems or lightning flash disturbances which are induced or conducted on to the telephone line. A single device provides 2-point protection and is typically used for the protection of 2-wire telecommunication equipment (e.g. between the Ring and Tip wires for telephones and modems). Combinations of devices can be used for multi-point protection (e.g. 3-point protection between Ring, Tip and Ground). These devices are housed in a surface mount SMB (DO-214AA) package.

The protector consists of a symmetrical voltage-triggered bidirectional thyristor. Overvoltages are initially clipped by breakdown clamping until the voltage rises to the breakover level, which causes the device to crowbar into a low-voltage on state. This low-voltage on state causes the current resulting from the overvoltage to be safely diverted through the device. The high crowbar holding current prevents D.C. latchup as the diverted current subsides.

SIDACtor® Surge Protection

Product Description:

SIDACtors® are solid state crowbar devices designed to protect telecom equipment during hazardous transient conditions. Capitalizing on the latest in thyristor advancements, Teccor designs their SIDACtors® with a patented ion implant technology. This technology ensures effective protection within nanoseconds, 500A surge current ratings, and simple solutions for regulatory requirements such as Bellcore 1089, TIA/EIA-1S-968, ITU-T K.20, ITU-T K.21 and UL60950.

Operation:

In the standby mode, SIDACtors® exhibit a high off-state impedance eliminating excessive leakage currents and appearing transparent to the circuits they protect. Upon application of a voltage exceeding the switching voltage (Vs), SIDACtors® will crowbar and simulate a short circuit condition until the current flowing through the device is either interrupted or drops below the SIDACtors® holding current (IH), once this occurs, SIDACtors® will reset and return to their high off-state impedance.

Surface Mount PTC Thermistors – For Overload Protection

The component consists of a high-performance PTC ceramic disc mounted in a lead-frame, for direct soldering onto a printed-circuit board (PCB) or substrate. The ceramic is soldered to the lead-frame by a local reflow process, during which the solder layer is melted to the metallized ceramic surface using a low residue flux.

Features:
• Ideal for pick-and-place circuit assembly • Low mounting height • Suitable for reflow soldering • Small ceramic diameter for faster response • Low heat transfer to substrate • Flat terminations for stable positioning and good solderability

PTC Thermistors YM120 Series

This range of PTC thermistors is designed to operate at main voltages and is intended for general purpose usage in over-current, over-voltage and direct over-temperature protection.

Each device in the range consists of a disc of barium titanate thermistor material with silvered faces and solder coated copper lead wires. A painted finish is applied which is not intended to confer insulating properties.

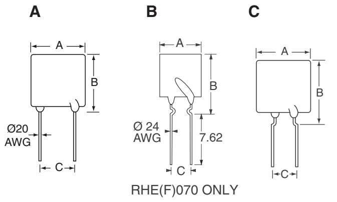
PolySwitch® Resettable Devices

PolySwitch resettable devices protect electrical and electronic circuits against excessive current, voltage, and temperature. After switching, the PolySwitch device is latched into its high-resistance, protective state by the small, sustained self-heating current. The device will reset only after it has cooled and the fault condition has been corrected, thus avoiding continuous cycling that could cause circuit damage. The device requires no manual resetting or replacement.

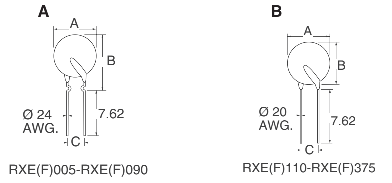
Definitions: • **Maximum Voltage:** The highest voltage the device can withstand (in its tripped state) without damage. • **Hold Current:** The maximum continuous current that will not cause the device to trip at 20°C. • **Trip Current:** The minimum continuous current that will cause the device to trip at 20°C. • **Maximum Current:** The largest fault current, at rated voltage, the device can interrupt without being damaged. • **Maximum R:** Maximum non-tripped resistance of the device.

Fig. 1 — RGE(F) and RHEF Series



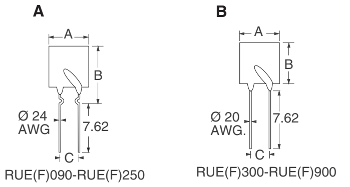
This product series can be used in a wide variety of automotive, computer and general electronics applications. The RGE(F) devices feature high current carrying capability (up to 13 amps) in a small package with fast trip times.

Fig. 2 — RXE(F) Series



These products function as the general general purpose line of circuit protection devices and are well suited for power supplies, alarm systems, speakers, motors and many other applications. The RXE(F) series range in hold currents from .05 ~ 3.75 amps and complement the RUE(F) devices by providing a higher voltage rating.

Fig. 3 — RUE(F) Series



These devices are also designed to be used in a wide variety of general electronics applications. They complement the RXE(F) series by providing a smaller form factor with lower resistance and higher hold current capability (up to 9 amps).

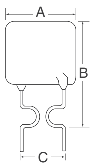
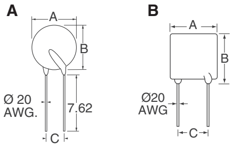
Fig. 4 — RTEF Series



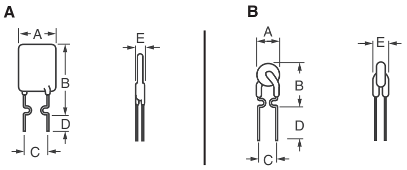
RTEF series polyswitches are specifically designed for IEEE-1394 applications.

Fig. 5 — LVR Series



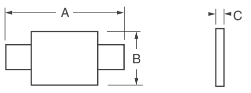
This product extends the proven PolySwitch technology of resettable overcurrent protection into higher voltage applications.

Fig. 6 — RUSBF Series



PolySwitch RUSB(F) devices are designed to meet USB and safety agency requirements.The RUSB(F) family of leaded resettable devices offers overcurrent protection for USB applications.

Fig. 7 — SRP(F) Series



These products help provide reliable, non-cycling protection for rechargeable batteries. Weldable nickel leads and a narrow, low-profile design make these devices extremely easy to install on the edges of battery packs.

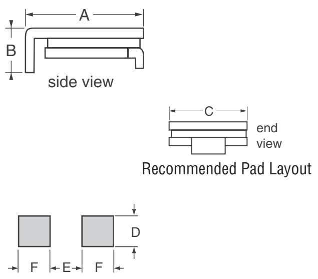
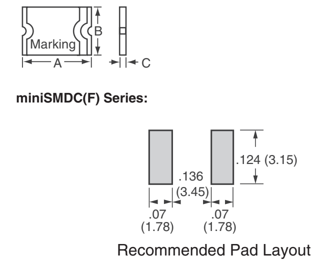
Fig. 8 — SMD(F) Series



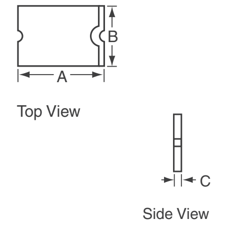
This product series is specifically designed for surface mount applications. The products range in hold currents from 0.3 amps ~ 3.0 amps and voltages from 6 volts ~ 60 volts. These devices are ideally suited for high density board applications in computer and computer peripheral products, telecommunications and general electronics applications. They are designed to be reflowed onto a PCB using standard surface mount processes. Packaged per EIA-481 standard.

Fig. 9 — miniSMD(F) Series



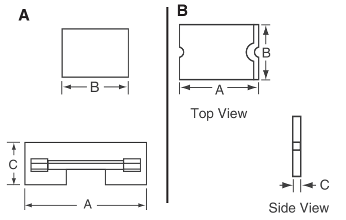
The miniSMD resettable devices extremely small size makes them excellent choices for keyboard and mouse ports, SCSI devices, battery packs, PC cards and sockets, cellular modems and phones, and portable electronic equipment. SMT packaging for automated assembly compared to SMD the miniSMD offers: 40% reduction in size, 300% faster time to trip, 50% reduction in DC resistance, 66% reduction in profile, 80% reduction in mass and drop in replacement for the NANO 2 device in many applications.

Fig. 10 — microSMD(F) Series



This product series is designed for surface-mount applications. Its smaller component size enables installation on crowded printed circuit boards and in small end-user devices such as digital cameras, personal digital assistants (PDAs) and palm-top computers. The new low hold current devices are ideal for protecting industrial sensors and data acquisition systems.

Fig. 11 — nanoSMD(F) Series



The nanoSMD(F) series reduces the component size to a 1206 footprint, nearly half the size of the microSMD(F) series and one-quarter the size of the popular miniSMD(F) series. The industries fastest time to trip. Smaller size saves board space and cost. Compatible with high volume electronics assembly.

PolyZen Polymer Protected Zener Diodes

Dim. inches (mm)

PolyZen devices are polymer protected precision Zener diode micro-assemblies. An advanced feature of the PolyZen micro-assembly is that its Zener and follow-on electronics are additionally protected by a resistively non-linear, polymer PTC (positive temperature coefficient) layer. This PTC layer is fully integrated into the device, is thermally coupled to the diode, and is electrically in series between V_{IN} and the diode clamped V_{OUT}. This advanced PTC layer responds to either diode heating or overcurrent events by transitioning from a low to high resistance state, also known as "tripping". A tripped PTC will limit current and generate a voltage drop, which helps to protect both the Zener and the follow-on electronics. This integrated PTC effectively increases the diode's power handling capability.

Benefits: • Helps shield downstream electronics from overvoltage and reverse bias • Trip events shut out overvoltage and reverse bias sources • Analog nature of trip events minimize upstream inductive spikes • Helps reduce design costs with single component placement and minimal heat sinking requirements
Features: • Overvoltage transient suppression • Stable VZ vs. fault current • Time delayed, overvoltage trip • Time delayed, reverse bias trip • Power handling on the order of 100 watt • Integrated device construction
Applications: • DC power port protection for systems using barrel jacks for power input • USB peripheral protection • DC power port protection in portable electronics • Automotive peripheral input power protection
Electrical: • **Operating Temperature Range:** -40°C ~ 85°C • **ESD Withstand:** 15KV Human Body Model • **Diode Capacitance:** 4200pF Typical @ 1MHz, 1V RMS

Definitions: • **Zener Voltage (V):** V_{OUT} as measured under a specified diode test current ($I_{FLT} = I_{zt}$) • **Zener Trigger Current (I_{zt}):** Current at which V_Z is measured. I_{zt} is time limited (typically 100µSec) • **PTC Hold Current (I_{HOLD}):** Maximum steady state I_{PTC} that will not generate a trip event at the specified temperature. Specification assumes I_{FLT} is sufficiently low so as to prevent the diode from acting as a heat source • **Typical Resistance (R Typ):** Resistance between V_{IN} and V_{OUT} pins during normal operation at room temperature • **Maximum Resistance ($R_{1Max.}$):** The maximum resistance between V_{IN} and V_{OUT} pins during normal operation at room temperature, one hour after first trip or after reflow soldering • **Maximum Initial Voltage (V_{INT} Max.):** The voltage (V_{IN} - V_{OUT}) at which typical qualification devices (98% devices, 95% confidence) survived at least 100 trip cycles and 24 hours trip endurance at the specified voltage and current I_{PTC} • **Zener Current (I_{FLT}):** Current flow through the Zener diode • **Maximum Zener Current (I_{FLT} Max.):** Maximum RMS fault current the diode portion of the device can withstand and remain resettable; testing is conducted at +/- 24V and -16V with no load connected to V_{OUT}

Test Board Features: • **Thickness:** 0.062 inches • **Board Material:** FR4 Laminate (glass, epoxy) with 2-sided 2oz. copper cladding • **Plating:** 3 ~ 5µ inches Gold over 100µ inches Nickel on all exposed pads and vias • **Connections:** 3 Gold-plated contact fingers (.30" X .50") identified V_{IN}, V_{OUT}, GND. 3 Gold-plated vias provided as alternate connections.

SiBar Thyristor Surge Protectors

SiBar thyristor surge protectors are designed specifically for telecommunications and computer telephony applications, including: • Modems • Fax machines • PBX Systems • Phones • POS Systems • Analog and digital linecards • Other customer premise and network equipment requiring protection.

Features:

- Bidirectional transient voltage protection
- High off-state impedance
- Low on-state voltage
- High surge capability
- Short-circuit failure mode
- Surface-mount technology
- UL 497B recognized, file #E179610

SiBar thyristor surge protectors are bidirectional silicon devices that foldback in the presence of transient overvoltage faults. When the breakover voltage of a SiBar device is exceeded, the device switches from high to low impedance to protect sensitive downstream equipment from harmful voltage surges. The device remains latched in a low-impedance state until the current decreases below the hold current, at which point the device returns to its high-impedance state. SiBar devices may be used in conjunction with PolySwitch resettable devices in telecommunications applications, including network equipment and customer premise equipment. Proper selection of both devices can provide reliable, self-resetting overvoltage and overcurrent protection, allowing designers to meet worldwide telecommunications standards and to lower equipment-service and warranty cost.

Littelfuse® ESD Transient Voltage Suppression Arrays

This is an array of SCR/Diode bipolar structures for ESD and over-voltage protection.

The SCR Structures are designed for fast triggering, if a transient pulse is detected with a voltage level greater than one V_{BE}, negative or positive pulse, above V+ or below V- the device will be activated.

Some of the applications where this device works very well is for Microprocessor/Logic Input Protection, Data Buss Protection, Analog Device Input Protection, or a Voltage Clamp.

Features:

- Fast Switching Times
- Low Input Leakage
- Low Input Capacitance
- Operating Temperature Range: -40°C ~ 105°C

PTC Resettable Devices Surface Mount

PTC Resettable devices utilize a unique polymer-based, Positive Temperature Coefficient (PTC) material to protect electrical circuits against overcurrent conditions. **PTC Resettable Operation:** In normal operation, the Littelfuse PTC has many conductive paths and a very low resistance. In an overcurrent condition, the temperature of the polymer material rises. This dramatically reduces the conductive paths resulting in an immediate rise in resistance. In this condition the device provides circuit protection by significantly limiting the flow of current. However, once the cause of the initial overcurrent condition is eliminated, the Littelfuse PTC cools down and resets to a low resistance value permitting the normal current flow to resume. **Agency Approvals:** • UL: Recognized under Components Program of Underwriters Laboratories • CSA: Recognized under Component Acceptance Program of the Canadian Standards Association • TUV approved **ELECTRICAL DEFINITIONS:** • **Ihold:** Hold Current: Maximum current device will sustain for 4 hours without switching at 20°C • **Itrip:** Trip Current: Minimum current that will switch the device into a high resistance state at 20°C • **Isc:** Maximum short circuit current device can withstand at rated voltage • **Ril:** Minimum initial resistance of device at 20°C, prior to tripping • **Rat:** Maximum measured resistance in the nontripped state 1 hour post reflow with reflow conditions of 245°C for 20 seconds. **NOTE:** Littelfuse part number without suffix "T" is form, fit, and functionally the same. The change that occurred is the manufacturing location, which has been certified to Littelfuse quality standards.

Devices are not intended to be used for continual, repeated tripping. ***CAUTION:*** *Operation beyond the specified ratings may result in damage and possible arcing and flame.*

Note (1): The product is 100% tested for 30VDC operating voltage at 25°C. Continuous operation with higher than 12VDC under extreme temperature and humidity may cause increasing leakage current and/or shifting device resistance. However, even under severe environmental test, characteristics of the device did not change up to 12VDC operation.
Note (2): Some shifting in characteristics may occur when tested over several hundred ESD pulses at very rapid rate of 1 pulse per second or faster.
Note (3): Per IEC 61000-4-2, 30A @ 8kV, level 4, clamp measurement made 30ns after initiation of pulse, all tests in contact discharge mode.
Note (4): Trigger measurement made using Transmission Line Pulse (TLP) method.
Note (5): PolySurg devices are capable of withstanding up to a 15kV, 45A ESD pulse. Device ratings are given at 8kV per Note 2, unless otherwise specified.

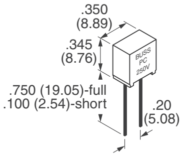
PC-TRON® Subminiature Fuses



Characteristics:
Offers short-circuit performance which until now could only be found in much larger size glass tube fuses. At 250VAC, the 1/2 to 3 amp PC-Tron can safely interrupt 50 amperes; at 125VAC the 1/2 to 5 amp versions can interrupt 10,000 amperes. This makes the PC-Tron subminiature fuse ideal for line-side protection of power supplies.
Time Current: • Carry 100% of rating for 4 hours minimum; open at 200% of rating in 10 seconds maximum
Construction Material: • Body: High temperature plastic • Leads: Tin plated copper
Agency Approvals: UL Recognized and CSA Certified

Encapsulated Thermal Switches

Encapsulated Thermal Switches are ideal for sensing the temperature of a surface or of stagnant air in an enclosure. Available with PC pins or with flexible wire leads for remote installation. Their high temperature resistance and high dielectric strength make it ideal for protecting heatsink-mounted semiconductors. Other applications would be protecting power supplies, or simply turning on a fan at a desired temperature.

Current Sensitivity: The thermal switches are not current sensitive at rated currents. At loads above the rated values, up to maximum loading there is self-heating of the current carrying contacts.

Insulation Resistance: 2500 V @ 25°C, Leads to Earth 1500 V @ 100°C. Across open contacts, dependent on response temperature: 500 V eff. AC.

Marking: Response temperature in clear text (5°C steps). Normally Closed = blue or black (epoxy); Normally Open = red (epoxy)

Bi-metal Cutouts, Temperature Regulators / Temperature Limiters

The thermal response works a bimetal snap element electrically connected to the switch contact. The switch system is current insensitive. The thermal switches react only to external thermal effects. Double contacts ensure high switch performance and long service life. The housing, base, and the mounting brackets are voltage-free (Standard version: base and mounting brackets are aluminum-plated steel). Heat transfer occurs directly through the metallic base via convection, radiation and conduction in gaseous and solid media. The mounting flange is floating and can be rotated to any desired position with respect to the electrical terminals. ***Please note: Reset temperature will be between 5°C ~ 50°C below the standard response temperature.***

ADVANTAGES:

- High pressure resistance
- High response sensitivity
- Numerous applications
- Various housings, connections and mounting styles

TS3 Series Moxie® Thermal Sensors

Dimensions in inches

Moxies are variable resistance NTC thermal sensors having a highly specific "transition region." Within this transition region the devices exhibit a coefficient from -40%/°C to -200%/°C. Below the transition region they exhibit a linear "thermistor" characteristic of -2 to -4%/°C.

Technical Data: • Maximum Allowable Operating Temperature: 120°C • Minimum Allowable Operating Temperature: -40°C • Maximum Allowable Operating Voltage @ 25°C: 125Vac • Maximum Allowable Operating Power (Any Temp.): Normal use less or equal to 0.5mWatt • Insulation Strength (Between Leads and Cap): 600Vdc • Conductors: Gold plated leads

Note: Please see data sheet for additional electrical characteristics.

YGM Series PTC Thermistors

PTC thermistors act as thermal protection for electrical machines, and are well known particularly as motor-protectors. PTC thermistors have a non-linear resistance/ temperature response, and at a specified temperature the resistance changes rapidly to a very high value.

Magnetic Hydraulic Circuit Breaker

Dim. in mm

Fig. 1

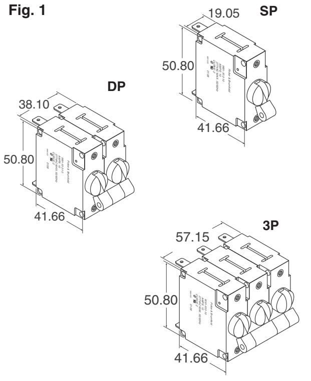

Fig. 2

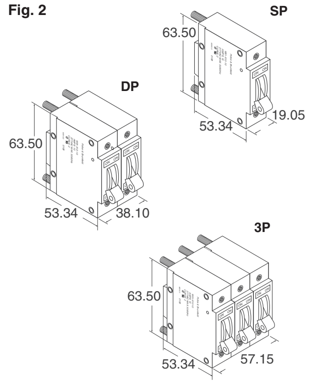

The W6/W9 series are designed for the international market. Magnetic hydraulic breakers are a proven design where the hydraulic delay provides tripping that is highly tolerant to changes in ambient temperatures. W9 units have ON/OFF molded into the area at the base of the toggle.

- **Calibration:** Breakers will hold 100% of rated current. Breakers may trip between 101% and 124% of rated load. Breakers must trip at 125% of rated load and above. • **Operating Temperature:** -40°C ~ 85°C

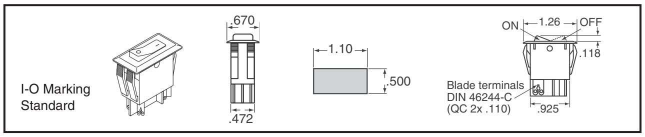
E-T-A
Circuit Protection & Control

E-T-A circuit breakers for equipment are designed as safety critical items for protection during equipment failure. These circuit breakers may be required to operate just occasionally or very often during the life of the equipment and can confidently be reset by inexperienced personnel.

Thermal breakers respond in a similar manner as a slow blow fuse. All thermal breakers carry 100% rated current continuously and trip within one hour at 140% rating. Selection should be based on 125% of your maximum current required. Magnetic breakers are fast-acting devices which are highly tolerant to changes in ambient temperatures and sensitive to small overloads.

Combination Rocker/Circuit Breaker Switches



Miniaturized single pole rocker/thermal circuit breaker combining ON/OFF switching and extremely fast overload performance in a single component. Returning the rocker switch through the OFF position and back ON will reset the mechanism and restore the supply. Illuminated versions – 120VAC lamp **Applications:** Motors, transformers, solenoids, PCBs, hand-held machines, appliances, instrumentation. **Voltage rating:** AC 250V; DC 50 up to 5A UL/CSA **Typical life:** 30,000 operation cycles **Ambient temperature:** -40°C ~ 70°C **Insulation voltage:** 2.5kV **Dielectric strength:** AC 3,000V

NOTES:

1. **Rated Functioning Temperature** (UL: TF, CSA, VDE, BEAB: Tf). The temperature at which a TCO changes its state of conductivity to open circuit with loading detection current only. Tolerance: ▽ : ±7°C; UL, CSA, VDE, BEAB: 0 / -10°C
2. **Functioning Temperature**: (Fusing-off temperature): The functioning temperature at which a TCO changes its state of conductivity to open circuit in the ambient air oven which increases temperature by 1°C per minute and with loading detection current of 0.1A or less.
3. **Maximum Operating Temperature:** The maximum temperature at which a TCO can be maintained while conducting rated current for 3000 h.
4. **Holding Temperature** (UL: TH, CSA: Th, VDE, BEAB: Tc). The maximum temperature at which a TCO can be maintained while conducting rated current for 168h which will not cause a change in state of conductivity to open circuit.
5. **Maximum Temperature Limit** (UL: TM, CSA, VDE, BEAB: Tm) The maximum temperature at which a TCO can maintain its mechanical and electrical properties without closing again for 10 minutes after a TCO has changed its state of conductivity.

‡ P10908-ND and P10910-ND are additionally approved for UL, on DC50V 5A.

† Std. DC Resistance is <15mΩ, A = <16mΩ, B = <17mΩ.

Environmentally Sealed Keypads

700 Series

The 700 Series of sealed keypads intended are for use individually or as modular building blocks to create more complex key-panel layouts. Unlike other sealed keypads, the 700 series have excellent tactile characteristics providing fast and reliable data input. When a keytop is depressed a conductive rubber pill makes contact with a gold on nickel plated PCB. These contact materials provide the highest level of protection against corrosive atmospheres and contact oxidization. Each keypad has interchangeable keytop legend tiles. Keypads come in two colors, gray or black, and feature a matrix style output. Instructions and pinouts are included. Compatible with Storm Universal Encoder part number "MGR1602-ND".

A7B Series:

Features: • Dustproof construction ensures highly reliable performance at low voltage and very small current even under adverse environmental conditions • Switch units can be assembled simply by fitting the integral hook coupler of each unit into the mating unit, thus eliminating the need of nuts and bolts for assembly • Switch assembly can be mounted easily by merely pushing the assembly into the mounting panel cutout from front

A7CN Series:

Features: • Designed specially for printed circuit boards • The transparent window plate fitted in the readout section prevents the ingress of dust and also protects dial characters against wear by incorrect handling • Switch units can be assembled simply by fitting the integral hook coupler of each unit, into the mating unit, thus eliminating the need of nuts and bolts for assembly

A7D Series:

Features: • Cost effectiveness and improved reliability achieved through insert-molding and fewer component parts • Plastic spring with minimal fatigue and a mechanical service life of 30,000 operations

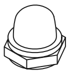
Pushbutton Switch Boots



APM's sealing boots are designed to protect your switches and potentiometers from hostile environments without compromising or interfering with the switches basic function. Boots create a full environmental seal even under high-pressure washdowns. Each seal is made from a tough, high tear strength elastomer that is resistant to most chemicals, lubricants, acids and solvents. UL and CSA recognized which facilitate easier agency listings and most Hexseals are QPL approved under MIL-B-5423.

NKK® SWITCHES Process Sealed Miniature Toggle Switches

M2T Series: Interior bushing is sealed with O-ring which surrounds the actuator. Bushing and top of the housing are one molded piece, achieving the exterior seal. Ultrasonic welding is used to seal the bushing unit to the base. Terminals are epoxy sealed for safeguarding the switch at the base. **Features: • Electrical Capacity:** Logic Level (code G): 0.4VA maximum @ 28V AC/DC maximum. **• Dielectric Strength:** 1,000VAC minimum between contacts; 1,500VAC minimum between contacts and case. **• Mechanical Life:** 100,000 operations minimum **• Electrical Life:** 50,000 operations minimum for gold **• Operating Temperature Range:** -30°C ~ 85°C

B Series: Sealed body construction permits switches to be subjected to time- and money-saving automated soldering techniques. Can be safely cleaned of flux without fear of compromising operating characteristics. **Features: • Electrical Capacity:** Logic Level: 0.4VA maximum @ 28V AC/DC maximum **• Dielectric Strength:** 500VAC minimum **• Mechanical Life:** 100,000 operations minimum for On-On and On-Off-On **• Electrical Life:** 50,000 operations minimum **• Operating Temperature Range:** -30°C ~ 85°C

G3T Series: Ultra-miniature size allows high density mounting, and extremely light weight of 0.6 gram makes these switches ideal for handheld equipment. Combination of design features achieves total seal and allows automated processing techniques, including flux cleaning procedures: one-piece bushing and housing, rubber seals surrounding actuator and base, epoxy at joint of case and base, and molded-in, epoxy sealed terminals. **Features: • Electrical Capacity:** Logic Level: 0.4VA maximum @ 28V AC/DC maximum **• Dielectric Strength:** 500VAC minimum **• Mechanical Life:** 50,000 operations minimum **• Electrical Life:** 50,000 operations minimum **• Operating Temperature Range:** -30°C ~ 85°C

Contact Material Options
W= 3A @ 125 VAC
G = 0.4VA max @ 28V AC/DC max
MB2000 Series W = 6A @125VAC

MB2000 Series:
Guide interlocked with actuator block prevents window locking and maintains correct plunger alignment to assure contact stability. Employs an over-center actuator mechanism, which diminishes sparking and increases operating life in AC circuits.

- **Contact Resistance:** 10 milliohms maximum for silver: 20 milliohms maximum for gold
- **Insulation Resistance:** 1,000V megohms minimum @ 500V DC
- **Mechanical Life:** 50,000 operations minimum for splashproof models 100,000 for all other models

MB2400 Series:
Anti-jamming design protects contacts from damage due to excessive downward force on the actuator. Stainless steel frame resists corrosion.

- **Contact Resistance:** 20 milliohms maximum for silver: 30 milliohms maximum for gold
- **Insulation Resistance:** 1,000 megohms minimum @ 500V AC
- **Mechanical Life:** 200,000 operations minimum
- **Operating Temperature Range:** -30° ~ 85°C
- **Cleaning:** These devices are not process sealed. Hand clean locally.

NEW! AML and PB Series Switches and Indicators

AML Series: Features: MICRO SWITCH AML Advanced Manual Line combines functional flexibility with electrical versatility to provide a broad range of options to choose from.
Installation: They snap in from the panel front individually or in vertical or horizontal strips; or in sub panel mounted strips and matrices that can be pre-assembled and pre-wired to assure accurate alignment and efficient panel building.
Characteristics:
- UL recognized, CSA certification
- Electrical/Mechanical Life: 25,000 cycles

PB Series: Features: These switches resemble the touch-feedback design, but have a flexible leaf actuator for lower operating force and shorter button travel. An elastomer seal is bonded between actuating plunger and button collar. An O-ring seals the button assembly to the panel front.

Joysticks

RoHS COMPLIANT

1000 Series: The 1000 Series are robust, switch joysticks. Based on industry standard V3 and V4 microswitches, they can switch 6A, 10A or up to 16A. The 1000 Series are ideal for general machine control type applications where the user is directing equipment at a predetermined speed. **4000 Series:** The 4000 Series is a range of highly versatile, single, dual, or tri-axial, proportional joysticks. Unlike other potentiometer based joysticks, the 4000 Series has an all-metal mechanism for maximum possible robustness and performance over life. The range employs high quality, plastic conductive film potentiometers as standard, and is designed as a sub-panel mount unit. The 4000 Series is ideally suited to medium duty applications such as electric vehicle control. This series remains the preferred choice for applications which require a life greater than five million cycles and absolute immunity to RFI. **5000 Series:** The 5000 Series is a family of cost optimized, potentiometer joysticks. With particular attention paid to the style of the unit and a low installed depth, these joysticks are ideal for lighter duty applications such as CCTV keyboard control. **9000 Series:** The 9000 Series offers a range of single, dual, or tri-axial products, utilizing contactless sensing to give highly repeatable proportional signals that do not degrade with use. The 9000 Series also offers a range of electronic features including dual decode technology providing for electronic "at-centre" or "internal fault" detect, which makes it the ideal user interface for complex and safety critical applications such as materials handling or power chair control.

A22 Series Switches

Omron's A22 Series of pushbutton switches offer flexible features not found in other competitors switches. Switch blocks are hand snapped into the back of the switch body enabling the end user to replace, add or modify the switching outputs in seconds. If you need a DP switch simply snap on another switch block to complete your needs. Switch blocks feature screw-recessed (finger safe) terminals to meet both North American and European safety standards. Switches are water, oil and dust sealed to IP65 standards. Switch units come completely assembled and ready for installation. Purchase additional switch blocks for replacement and additions.

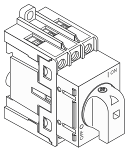
AMERICAN ELECTRICAL INC.

DIN Rail Mounted Switches and Accessories



Isolation of control equipment is an important design consideration. Disconnect switches can provide isolation and lock out points for power supplies, transformers, small motors or any other types of controls. Accessories, such as auxiliary contacts are used to electrically indicate the switch position. Remote operation shut offs and handles are offered for those designs that are thru-panel.

The UB2's options feature super bright bi-color LEDs with alternating legends by color, all in one switch. These options offer innovative design engineers an exceptional choice to replace outdated, split legend caps. Super bright, red/green, bi-color LED switch selections can be specified with alternating ON/OFF, START/STOP, or OPEN/CLOSE legend configurations. The glossy polycarbonate cap features a single filter with a dual legend under the clear lens. When actuated, the green or red LED brilliantly highlights the alternating legends, clearly indicating the desired circuit status. Legend text is black. **Electrical Capacity: • Power Level (Silver):** 5A @ 125/250VAC or 30VDC **• Logic Level (Gold):** 0.4VA max.@ 28V AC/DC max. **Mechanical Life:** 1,000,000 Operations min. (momentary); 200,000 Operations min. (alternate action) **Operating Temperature Range:** -25°C ~ 50°C

CW Industries slide switches became popular with the industrial explosion after World War I. Thousands of consumer products have used CW Industries slide switches for applications such as: radios, TVs, appliances, and automotive. Aircraft, telephones, and marine equipment use CW Industries slide switches for both power switching and low level switching. Available in both solder eyelet versions for hand soldering or pc mount terminals for direct mounting. All slide switch actuators and buttons are black nylon 6/6. **MATERIALS:** • Buttons: Type 6/6 nylon, black • Moving Contact: Copper; • Moving Contact Plating**:** Silver •Terminals: Copper • Terminal Plating: Silver **Specifications:** • High Voltage Breakdown: Minimum of 1000 volts RMS, 60Hz for one minute between parts of opposite polarity. • Contact resistance: Less than 0.01Ω at 20 milliamperes dc. • Life Cycling (no load): Switches will be operative after 10,000 (minimum) cycles at the rate of 10 cycles per minute • Life Cycling (load)**:** Switches will be operative after 6,000 (minimum) cycles at the rate of 10 cycles per minute at rated load. **APPROVAL LISTING:** UL/CSA

Grayhill DIP Switches

Grayhill's unique spring and ball contact design offers unparalleled reliability compared to conventional wiping contact designs. When actuated the ball rests between two contacts allowing multiple points of contact while the spring compression is at maximum pressure. Temperature, humidity and vibration have minimal affect on this design.

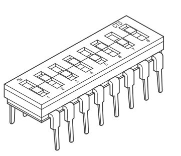
Maximum Contact Resistance: 100mΩ after 10,000 cycles switching 50mA @ 24VDC (206 Series); 100mΩ after 7,000 cycles switching 50mA @ 24VDC (193 and 194 Series); 500mΩ after 2,000 cycles switching 50mA @ 24VDC (195 Series); 500mΩ after 2,000 cycles switching 50mA @ 15VDC or 100mΩ after 1,000 cycles switching 25mA @ 24VDC (208 Series); 50mΩ maximum at end of life (209 and 219 Series). Gold finish refers to internal contact area of the switch, terminals are solder coated.

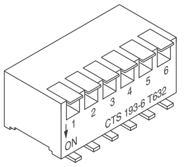
Maximum Non-Switching Rating: 100mA or 50VDC.

Insulation Resistance: Across open switch and between adjacent closed switches - 1 x 10^9Ω (218 Series: 100mΩ minimum).

Dielectric Breakdown: 500VDC maximum for 1 minute (218 Series – 300VDC maximum).

Switch Capacitance: Between adjacent switches maximum - 5.0pF (218 Series: 10pF).





Shock: Per MIL-STD-202F, method 213B, condition A with no contact inconsistencies greater than 1µsec (206, 208, 209, 218 and 219 Series); no mechanical damage or changes of switch settings with 25G applied (193, 194, 195 and 204 Series).

Vibration: Per MIL-STD-202F, method 204D, condition B (.06" or 15G's between 10Hz to 2KHz) with no contact inconsistencies greater than 1µsec (204, 206, 208, 209, 218, and 219 Series). No mechanical damage or changes of switch settings during or after testing when tested in three mutually perpendicular planes at 10-50Hz sweep or at 60Hz constant vibration (193, 194 and 195 Series).

Magnetic Reed Sensors

Meder Magnetic Sensors are magnetically operated proximity switches for either surface mounting, PCB or panel mounting. Use for telephone hook switch detection, door and window sensing, limit switches for garage doors, hoists and conveyers. Switches are completely sealed for indoor/outdoor operation, available in various magnetic sensitivities, perfect for auto-insert equipment and auto-mated processes. All sensors will actuate when a magnetic field is introduced to them and will remain actuated until the magnetic field is removed. **Operating Temp:** -20°C ~ 85°C, -20°C ~ 130°C for Fig. 3.

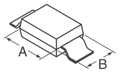

Fig. 6

The SIP relay is the industry choice for a wide variety of designs where economy, performance and a compact package are needed. The 9007 Spartan Series is a general purpose economy version of the 9001 for applications with less stringent requirements. The 9081 Spartan Series is similar to the 9007, but with alternate industry standard footprints to accommodate other options, including Form C types. These relays are well suited for applications in Security, Instrumentation and Modems.

Series	Dimensions-inches (mm) L	W	H	C
9001/ 9007	.760 (19.30)	.200 (5.08)	.300 (7.62)	.200 (5.08)
9002	.760 (19.30)	.200 (5.08)	.300 (7.62)	.100 (2.54)
9091	.600 (15.24)	.150 (3.81)	.275 (6.98)	.150 (3.81)
9081	.890 (22.61)	.275 (6.99)	.315 (8.0)	.200 (5.08)

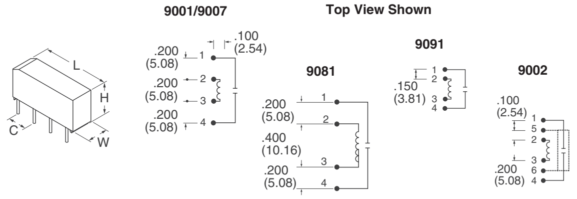

Fig. 7

The SIP relay is the industry choice for a wide variety of designs where economy, performance and a compact package are needed. The 9081C are 2 x SPST-C/O relays offered in industry standard packages. Use 9081C (.2 x .4 x .2) SIP for industry standard footprint applications or 9081C1 (.2 x .2 x .2 x .2) for standard footprint applications requiring a SPDT function. These relays are well-suited for applications in Security, Instrumentation and Modems.

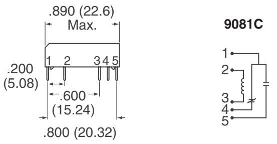

Fig. 8

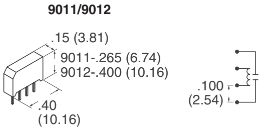
The 9012 package dimensions are 47% smaller than standard 9000 SIPs, yet the relay retains the 10W switch ratings of its larger counterparts. The 9011 package dimensions is 65% smaller than the standard 9000 SIPs and incorporates the RI-70 switch rated 3W. The 9117 goes one step further, reducing package size by 65% from standard 9000 SIP's. This is the smallest SIP footprint with a 3W rating. These miniature SIP relays are ideal for use in ATE applications and other high reliability test, measurements and telecommunications applications where high board density and long life are key requirements.



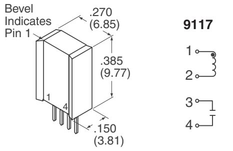


Fig. 9

The 9092 model, because of its increased height, allows for incorporation of 2 form A switches in the same board space. These miniature SIP relays utilize Coto's 10W switch technology, making these SIP relays ideal for use in ATE applications and other high reliability test, measurement and telecommunications applications where high board density and long life are key requirements.

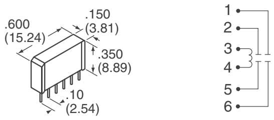

Fig. 10

The 9104 Series adds high voltage switching 1000V capability and high voltage standoff capability to a SIP relay package. These high voltage, high performance relays are ideally suited for Automatic Test Equipment, Instrumentation, and Process Control applications where voltage isolation is a key design requirement.

COTO TECHNOLOGY

RF Relays

B10 Relays: Coto's Ball Grid Array (BGA) construction offers a breakthrough in reed relay performance. This patented technology allows for shorter RF paths in a controlled 50Ω environment to minimize signal attenuation. The designer is now able to switch or pass signals with wider bandwidth and faster rise time than alternative technologies.

B40 Relays: The B40 is four independent form A channels in one quad package. This 4-in-one BGA packaging allows relays to be integrated easily on boards designed for surface mount processing.

Applications: • IC Testers • In-Line Relay Testers • Memory Testers • Mixed Signal Testers • High Bandpass Applications

ITT's MPS Series Magnetic Proximity Sensors operate when a magnetic field approaches two magnetic reed blades. The magnetic field overcomes the spring tension of the blades and brings the contacts together. When the magnetic actuator is removed, the reeds separate by their own spring tension. Comes complete with reed switch and matching actuator. **FEATURES:** • Long Life Expectancy — 10 million operations • Housing made of rugged impact resistant ABS plastic that meets or exceeds UL requirements for fire retardation • Sealed Contacts allowing the reed to operate in damp and dusty environments • Wide gap performance makes magnet and switch alignment less critical. **SPECIFICATIONS:** • **Contact Ratings:** 100VDC or 100VAC maximum @ 0.3 Amp Maximum; 1.0 Amp Maximum Carry Current • **Operating Temperature:** -40°C ~ 100°C • **Mechanical & Electrical Life:** 10 Million Operations **MATERIALS:** • **Housing/Spacer/Cover:** ABS Plastic (UL94V-0), white • **Wire Leads:** UL1061, 22 AWG: stranded, made of copper or aluminum; Length: 12" (30.48cm) with ends stripped; Color: white • **Magnets:** Alnico V and Ceramic Ferrite 8 (MPS80WG model only).

NOTE: Wide gap contacts are polarity sensitive. Use alignment dots for proper installation of surface mount contacts.

Magnetic Reed Switches

Reed Switches consists of two ferromagnetic reeds that when introduced to a magnetic field, attract toward each other to close. Once the magnetic field is removed, the contacts again spring open. Reed switches are ideal in auto, marine and moist environments including water, fuels, and dust-laden atmospheres. The smaller Ampere Turns number, the more sensitive the reed switch to magnetic fields.

Magnets

A permanent magnet is the most common source for operating the magnetic reed switch. The method used to position the magnet depends upon the switching requirement but can be used in one of four basic techniques; perpendicular or parallel motion (up and down, side to side) rotation (revolving magnet or switch), shielding (passing a ferromagnetic material between the switch and magnet) or biasing which is using one magnet of opposite polarity to cancel another magnet's lines of force.

Ultra-Mini Reed Switches

SCR Devices Industry unique flat bladed, square reed switches. Ideally suited for small signal to moderate load switching tasks. With sputtered ruthenium contacts and laser-sealed glass, the FR series reed switch from SRC Devices is one of the most reliable reed switches available today. In addition, our square glass and flat leads allow for seamless integration into a high speed, automated assembly process via our standard SMT configuration. SRC Devices reed switches are the only reed switches fully SMT compatible by design, with or without overmolding. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Magnetic Reed Switches

Reed switches have been used in thousands of applications from non-contact switches to sensing direction, speed and position. Reed switches are a reliable, low cost, low current switch that are hermitically sealed for operation in the most demanding environments. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Over Molded Reed Switches

All the advantages of the non-molded DYAD®, plus the added strength of a low-stress plastic encapsulation. The SRC Devices Molded DYAD is designed for the harshest, most demanding applications. This plastic shell provides superior mechanical strength, eliminates concerns over handling glass switches, and provides an ideal solution for high speed, automated assembly environments. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Applications:

- **Security**
  - Proximity Sensing
  - Smoke Alarms
- **Automotive**
  - Level Sensor
  - Lamp Current Sensor
